Mail: WQCD-B2-Drinking Water CAS

Revision: 10/19/2022

4300 Cherry Creek Drive South; Denver, CO 80246-1530

Section I Public Water System Information

PWSID: CO0160450	System Name: Rosewood Hills Property Hoa	
Contact Person: Christopher Sutton	Phone: +1 719 339 5834	Email: chrishsutton@aol.com
*System Authorized Signature 	Printed Name: Christopher Sutton	Date: 9/5/24
*Signature not required if submitted online.		

Section II Service Line Inventory Summary

Do **NOT** use this form if you have any lead, galvanized requiring replacement, or unknown service lines.

Certificate of Accuracy: The supplier named above hereby certifies that a service line inventory of the entire service area including both the **system-owned** and **customer-owned service lines** has been completed and verified following review of previous materials evaluations and all available records, maps and information on permits, codes, and inspections to make a determination of that all service line material at time of submittal.

Additionally, the supplier certifies all service lines have been determined through an evidence based record, method, or technique to be "Non-Lead" and has not identified any "Lead" or "Galvanized Requiring Replacement" or "Lead Status Unknown" service lines as defined below:

"Lead" means where all or a portion of the service line is lead.

"Galvanized Requiring Replacement" means a galvanized service line that is known to have been downstream from a lead service line in the past or is unknown to have been downstream of a lead service line currently or in the past.

"Lead Status Unknown" means a service line material that is not known to be lead, galvanized requiring replacement, or non-lead.

Furthermore, an inventory listing each service line, including its material and the verification method used to determine the material of each line, is available for Department review upon request.

Total Number Service Lines in the Distribution System at Time of Submittal	47
Total Number of Non-Lead Service Lines in the Distribution System at Time of Submittal	47

Describe in Detail Below ALL of the Methods Used to Make the Non-Lead Service Line Material Determination, including which Records were Reviewed and if any Additional Investigation Methods were used:

Inventory complete in collaboration with WSP/Sunrise Engineering.

All water system records alongside historical imagery and tax assessor data were used to determine structures built post-1988 lead ban.

Water system deployed customer self-assessment data to verify customer-owned lines.

Water system was built post 1960 with the oldest line having been installed in 1975. 14 lines were installed post 1988. Customer self-assessment surveys were completed for those homes built in between 1975-1988. All surveys indicate that the customer-owned service lines are copper. Photos have also been taken alongside field verification as evidence. Since the system is built post-1960, there have been no records of lead being found in the system, and the oldest lines in the system have been determined copper on the customer-side, we can safely classify this system as a non-lead system.
